Description:

The modern casting process uses many different techniques and in all of them, liquid material is poured (or injected) into a hollow cavity of a desired geometrical shape and allowed to cool down to form a solidified part. The solidified part after it is extracted from the mold is known as a casting blank.

Advantage:

- 1.Casting can produce complex shapes that would be otherwise difficult or uneconomical to make by other methods.
- 2.Features like internal cavities or hollow sections can be achieved.
- 3.Large components can be produced in one-piece cast.

Application:

aerospace,medical,jewelry,ariline, automotive and golf clubs especially since the start of 3D printing technology.
