Description:

Die casting is a metal casting method that involves pouring molten metal into a mold cavity so that it solidifies to take up the shape of the mold. This technique of metal forming allows versatility in part size and shape, even for complex shapes with internal cavities or hollow sections.

Advantage:

1. Aluminium being a lightweight alloy allows making lightweight parts without compromising their strength.
2. it has the versatility to produce thin-walled simple or complex-shaped parts with good precision.
3. it has good corrosion resistance.

Application:

Automotive, Aerospace, Energy, Electronics, Construction, Engineering, and Medical.
